- Multitasking is rather more limited than for desktop versions of the software. That means you're required to exit a tool or video before opening another.
- The size of the download of the software has been reduced from a whopping 1.1GB to a miniscule 86MB. Compare that with the desktop leader, PhotoShop CS5 got up to nearly 300MB

Although this is not savings on the file size, the camera has the ability to shoot multiple still images when you are recording a video, or video has been shot, so you can take advantage of this.

For example, when saving for web within the CC version of Photoshop you would, instead of having to visit a web server to upload a file, access it from a networked computer.
